

ENVIRONMENTALLY FRIENDLY PRODUCT

## Product description

Vulmkoriz-R PL is a unary, water soluble anti-corrosion material developed on the basis of a copolymer aqueous dispersion. The product forms a permanently flexible, compact film insoluble in petroleum products and water. It has excellent adhesion and colour stability. It resists well to normal weathering, UV radiation and heavy mechanical stress. It contains corrosion inhibitor and zinc phosphate ingredients with dispersed fillers and admixture of special additives.

## Use:

Vulmkoriz-R PL is a multi-use (base and top) coating for steel structures, masts and electric poles etc. In particular, we recommend its use in cases where the substrate is in direct contact with petroleum products (gasoline, diesel, kerosene, jet fuel, oils, etc.)

## Benefits / Resistance

- good chemical and mechanical resistance
- resistance to raw water and all petroleum products
- resistant to chemicals, solvents, detergents and cleaners
- resists water penetration
- frost resistant
- resistance to weathering and UV radiation
- high inhibition of corrosion processes (category C2 (long durability))

## Test data

Conformity Certificate
TSÚS 239/2000

1301-CPD-0199
STN ISO 1515 (67 3031)
STN 732577
STN 732578
STN 732580
STN 732581
STN 732582
STN 733092
STN 730242
Product data:
colour
appearance
shelf life

RAL - according to customer's choice
matte, semi-gloss
24 months in original packaging in dry conditions
at the temperature $5-35^{\circ} \mathrm{C}$

## Physical data:

| solids content: | $66 \%$ |
| :--- | :--- |
| viscosity: | $7,5 \mathrm{dPa} . \mathrm{s}$ |
| abrasion resistance: | over 20 min. |
| density: | $1,35 \mathrm{~g} / \mathrm{ml}$ |
| adhesion to the substrate: | over $1,92 \mathrm{MPa}$ |
| water resistance: | $01 . \mathrm{m}^{-2}$ per 30 min. |
| frost resistance: | $1,74 \mathrm{MPa}$ after 20 cycles |

BIOTECHNOOO
。

## Theoretical capacity:

$5-8 \mathrm{~m}^{2} / \mathrm{kg}$ at a thickness of $50-60 \mu \mathrm{~m}$

## Processing temperature

minimum temperature of primer and air: maximum temperature of the substrate: ideal paint temperature
$5^{\circ} \mathrm{C}$ above the dew point
$30^{\circ} \mathrm{C}$
$15-22^{\circ} \mathrm{C}$

## Substrate:

Suitable substrates are metal structures (even light metals and alloys), roof cladding groups etc. The substrate must be coherent and sufficiently bearing, without dirt, grease and loose particles.

## Instructions for use:

Apply the anchor coat of Vulmkoriz-R PL diluted with water on a dry or slightly damp substrate in a ratio of $1 \mathrm{~kg}: 0.1 \mathrm{I}$. After drying (approx. 4 hours) apply another coat, i.e. mix of the paint material and water in the same ratio of $1 \mathrm{~kg}: 0.1 \mathrm{l}$. We recommend $2-3$ layers in the thickness of $100-120 \mu \mathrm{~m}$.

## Time data for application:

| dry to touch: | approx. 4 hours |
| :--- | :--- |
| re-coating interval: | approx. 4 hours |
| cured: | approx. 24 hours completely |
| at a relative air humidity of $65 \%$ and temperature of $23^{\circ} \mathrm{C}$ |  |

## Cleaning of tools

Immediately after use, with water.

## Safety

Vulmkoriz-R PL when handling, proceed in accordance with the general safety measures, follow the safety instructions on the packaging labels and on safety data sheets. Data, specifications, directions and recommendations given in this technical data sheet are based on experience gained in modeling of supposed ways of applications, or under specially defined conditions. Their accuracy, completeness or appropriateness under the actual conditions of any intended use is not guaranteed and must be determined by the user. The manufacturer and distributor are not responsible for the results achieved, loss, direct or consequential damages arising from failure to comply with the recommended use of the product, which go beyond the conditions herein

## Category and sub-category of a regulated product:

A/d/VR: Interior and exterior paints for wood, metal and plastics finishing. The limit value for the highest content of volatile organic compounds: $130 \mathrm{~g} / \mathrm{l}$.
The highest content of volatile organic compounds in the state in which the regulated product is ready for use: $117.3 \mathrm{~g} / \mathrm{l}$.

Name of the test, or the name of the tested characteristics and a number of a standard, or other identifier of the test method, procedure:

| determination of non-volatile substances | STN ISO 1515 (67 3031) |
| :--- | :--- | :--- |
| coating adhesion to the substrate | STN 73 2577 |
| water resistance of the surface finish | STN 73 2578 |
| transfer of water vapour through the surface finish | STN 73 2580 |
| resistance of the surface coating against sudden temperature changes | STN 73 2581 |
| abrasion resistance of the surface coating | STN 73 2582 |
| absorption | STN 67 3092 |
| resistance to oil products | STN 64 0242 |

## Samples conditioning:

Laboratory temperature $23^{\circ} \mathrm{C} \pm 2^{\circ} \mathrm{C}$.
Used test device, its metrological traceability:

| air conditioner cabinet ILKA | Z 900003 |
| :--- | :--- |
| laboratory oven | Z 900004 |
| Erichsen type 417 | M 900015 |
| glass bell with burette | M 900017 |
| technical stopwatch | M 900018 |
| analytical scales Sartorius BP 300 S | M 900088 |

Deviations from the standardized test procedure and all circumstances that might affect the test result:
none

## FOR CONCRETE STRUCTURES

## The initial tests verified:

| Property | Declared value or class | Number of test report and laboratory reference |
| :---: | :---: | :---: |
| Capillary absorption and water permeability | $<0,1 \mathrm{~kg} / \mathrm{m}^{2} . \mathrm{h}^{0,5}$ | Test Report no.151/2006 dated 13.04.2006 <br> TSÚS, n.o., branch Tatranská Štrba |
| $\mathrm{CO}_{2}$ permeability | > 50 | Test Report no.151/2006 dated 13.04.2006 <br> TSÚS, n.o., branch Tatranská Štrba |
| Water vapour permeability - equivalent diffusion thickness | class II from 5 m to 50 m | Test Report no.151/2006 dated 13.04.2006 <br> TSÚS, n.o., branch Tatranská Štrba |
| Adhesion in pull-off tests | 0,8 $/ \mathrm{mm}^{2}$ | Test Report no.151/2006 dated 13.04.2006 <br> TSÚS, n.o., branch Tatranská Štrba |
| Resistance to temperature changes - cyclic exposure to storm rain | After the test without blistering, cracking, or peeling, adhesion strength $0,8 \mathrm{~N} / \mathrm{mm}^{2}$ | Test Report no.151/2006 dated 13.04.2006 <br> TSÚS, n.o., branch Tatranská Štrba |
| Resistance to temperature changes - ageing 7 days at $70^{\circ} \mathrm{C}$ | After the test without blistering, cracking, or peeling, adhesion strength $0,8 \mathrm{~N} / \mathrm{mm}^{2}$ | Test Report no.151/2006 dated 13.04.2006 <br> TSÚs, n.o., branch Tatranská Štrba |

## Information on measurement uncertainty:

They are specified in tables of measured values in the form of the combined measurement uncertainty.

## Results of measurement

1. Water resistance ( $1 . \mathrm{m}^{-2}$ per 30 min )

| Sample no. | Water | Petrol | Diesel | Heating oil | Transformer oil |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 0 | 0 | 0 | 0 | 0 |
| 2 | 0 | 0 | 0 | 0 | 0 |
| 3 | 0 | 0 | 0 | 0 | 0 |
| Arith. mean | 0 | 0 | 0 | 0 | 0 |
| C.m.u. | 0,042 | 0,042 | 0,042 | 0,042 | 0,042 |

## 2. Absorptivity of the paint film after 72 hours (\%)

| Sample no. | Water | Petrol | Diesel | Heating oil | Transformer oil |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 0,216 | 0,188 | 0,106 | 0,097 | 0,097 |
| 2 | 0,209 | 0,201 | 0,101 | 0,096 | 0,096 |
| 3 | 0,208 | 0,204 | 0,108 | 0,104 | 0,104 |
| Arith. mean | 0,211 | 0,198 | 0,105 | 0,099 | 0,099 |
| C.m.u. | 0,0036 | 0,0069 | 0,0030 | 0,0036 | 0,0036 |

3. Equivalent diffusion thickness $r_{D}(m)$

| Sample no. 1 | 1,858 |
| :--- | :--- |
| Sample no. 2 | 1,796 |
| Sample no. 3 | 1,791 |
| Arithmetic mean | 1,815 |
| Combined measurement uncertainty | 0,0308 |

4. Adhesion to the substrate (concrete) (MPa)

| Sample no. 1 | 1,92 |
| :--- | :--- |
| Sample no. 2 | 1,88 |
| Sample no. 3 | 1,93 |
| Arithmetic mean | 1,91 |
| Combined measurement uncertainty | 0,0216 |

5. Resistance to sudden temperature changes - adhesion to the substrate after 25 cycles (MPa)

| Sample no. 1 | 1,74 |
| :--- | :--- |
| Sample no. 2 | 1,71 |
| Sample no. 3 | 1,75 |
| Arithmetic mean | 1,73 |
| Combined measurement uncertainty | 0,017 |

6. Resistance to oil - adhesion after 28-day storage

| Sample no. | Petrol | Diesel | Heating oil | Transformer oil |
| :---: | :---: | :---: | :---: | :---: |
| 1 | 1,73 | 1,72 | 1,57 | 1,59 |
| 2 | 1,77 | 1,69 | 1,61 | 1,64 |
| 3 | 1,71 | 1,66 | 1,50 | 1,57 |
| Arithm. mean | 1,74 | 1,69 | 1,56 | 1,56 |
| Combined measurement uncertainty: | 0,0249 | 0,0245 | 0,0455 | $\mathbf{0 , 0 4 2 5}$ |

## 7. Abrasion resistance (min)

| Sample no. 1 | $>20$ |
| :--- | :---: |
| Sample no. 2 | $>20$ |
| Sample no. 3 | $>20$ |
| Arithmetic mean | $>20$ |
| Combined measurement uncertainty | - |

## 8. Content of non-volatile substances (\%)

| Sample no. 1 | 61,66 |
| :--- | :--- |
| Sample no. 2 | 61,65 |
| Sample no. 3 | 61,61 |
| Arithmetic mean | 61,64 |
| Combined measurement uncertainty | 0,0216 |

Identified weaknesses:
none
